

## INSTALLATION INSTRUCTIONS FOR REVERSE BAYONET CONNECTORS INCORPORATING CRIMP CONTACTS

Amphenol® Reverse Bayonet Series Connectors incorporate MIL-STD-1651 insert arrangements as well as some special arrangements. Crimp type contacts in sizes 0, 4, 8, 12, 16 and 16S are available for use in these insert arrangements. This publication contains information for proper crimping, insertion and removal of crimp contacts in Reverse Bayonet Connectors, as well as applicable tool information.

### SECTION I: INSTALLATION

#### 1. Cleaning

Inserts, contacts and inside surfaces of shells must be kept free of oil, grease and dirt throughout the installation procedure. Use a clean cloth moistened with anhydrous, isopropyl alcohol.

2. Prior to any contact crimping operations, the backshell, grommet and sleeve must be slipped on the wire bundle in proper sequence.

Note: If a back grommet is used, identifying letters on the rear face are to be used as a guide in threading wires. The letter or letters on the grommet should align with the same letters on the rear face of the insert.

#### 3. Cable and Wire Preparation

- a. Provide for sufficient wire slack to permit easy installation of the connector.

Note: Stripping is done after placing the grommet (if used) on the wires. In some cases, where it is difficult to get wires through the grommet, the wire may be cut at a 45° angle.

- b. Using Table I as a guide, cut the wire to length and strip the insulation the appropriate distance from the end. Hot wire stripping methods are recommended wherever possible. If other methods are employed, use extreme care to avoid nicking or cutting wire strands.
- c. Check to be sure strands of wire are not separated. If necessary, reform by lightly twisting the strands together.

Note: When determining the connector shell size, observe the numbers molded in the front face of the insert. The first number indicates the connector shell size for the assembly. For example, an insert stamped 20-21, would indicate a shell size 20. Disregard the number following the dash, when determining shell size only.

**Table 1**

Contact Size	0	4	8	12	16
Strip Insulation	3/4"	1/2"	9/16"	5/16"	5/16"

#### 4. Crimping

- a. Insert the stripped end of wire into the contact wire-well and apply slight pressure until it is positively bottomed. Visually check to assure that wire strands are visible in the inspection hole provided in the wire-well.
- b. Using proper information from Table IV, select crimping tool and preset the tool in accordance with instructions provided with the tool.

**Figure 1: Good Crimp - Wires visible in inspection hole.**

- c. If the 11-7295 Series Crimping Tool is to be used, insert the contact and wire into the tool as far as possible, then close the tool handles. This tool has a built-in safety feature in that the handles cannot be reopened until the crimping cycle is completed. A complete uniform and reliable crimp is insured. **BE SURE TO USE CORRECT LOCATOR WITH CRIMPING TOOL** (see Table IV). Ref. Table II for tensile strength data.

Visually inspect the crimp. Wires should be visible in the inspection hole. See Figure 1.

- d. Where a contact must be crimped to a smaller size wire, it is necessary to utilize a wire-well adapter. Insert the adapter in the contact wire-well prior to insertion of the smaller gage wire. Table III lists the applicable wire-well adapters for the various wire and contact combinations.

**Table II  
 Tensile Strength for Crimp Joint Tests**

Contact Size	Wire Size	Initial Min. Pull-out Force lb. (Prior to Conditioning)
16	20	20
	18	40
	16	50
12	14	70
	12	110
8	8	185
4	4	450
0	0	800

**Table III  
 Wire Well Adapters**

Mating End Size	Wire Barrel Size	Allowable Wire Size	Required Wire Adapter Sleeve
16 Short	16	16	—
		18	—
		20	—
		22*	10-74696-6
16 Long	16	16	—
		18	—
		20	—
		22*	10-74696-6
12	12	12	—
		14	—
8	8	8	—
		10*	10-74696-1
4	4	4	—
		6*	10-74696-2
0	0	0	—
		2*	10-74696-7

\* When using wire adapter sleeve shown.

\* Pico Crimping Tool Co.

\*\* Letter Designation: S designates Short, L designates Long

\*\*\* 11-7365 Series Insertion Tool and 11-7370 & 11-7674 Series Removal Tools must be used with 11-7364 Arbor Press. Refer to L-632 for applicable operation instructions.

GENERAL NOTE: Use 11- tools or equivalent.

**INSTALLATION INSTRUCTIONS FOR  
REVERSE BAYONET CONNECTORS INCORPORATING CRIMP CONTACTS (Cont'd)**

**5. Installing Contacts**

- a. Using Table IV, determine the appropriate tool for contact insertion. Pilot pins may be used to assist in the installation of socket contacts. See Figure 2. Pilot pins can be ordered with reference to the following part numbers:  
10-242758-16 for size 16 socket contact pilot pins  
10-242758-12 for size 12 socket contact pilot pins  
10-242758-8 for size 8 socket contact pilot pins  
To assist in contact insertion, Vibraslide 084 Pinlube may be applied to the pilot pins or pin contacts.

**Figure 2: Pilot Pins for Assisting in Installation of Socket Contacts**

- b. When inserting size 16 contacts, use the 11-7354 insertion pliers. The tool handles are color coded blue.
- c. Grip the contact at the shoulder nearest the mating end of the contact. The contact should be positioned against the shoulder undercut in the tips of the tool. See Figure 3. Insert the contact in the applicable contact hole in the rear of the insert, until the tips of the tool bottom against the insert.

**Figure 3: 11-7354 Insertion Pliers for Size 16 Contacts**

- d. Remove and reposition the plier tips against the shoulder nearest the wire-well end of the contact. See Figure 4. Insert the contact to its "fully-seated" position.

**Figure 4: 11-7354 Insertion Pliers for Size 16 Contacts**

- e. When inserting size 12 contacts, use the 11-7082 Insertion Pliers. The tool handles are color coded yellow.
- When inserting size 8 contacts, use the 11-8220 Insertion Pliers. The tool handles are color coded green.
- f. Grip the contact at the shoulder nearest the wire-well end of the contact. The contact should be positioned against the shoulder undercut in the tips of the tool. See Figure 5. Insert the contact into the applicable contact hole and seat the contact in position.

**Figure 5: 11-7082 Insertion Pliers for Size 12 Contacts**

- g. The Arbor Press (11-7364) can be used for inserting size 16, 12 and 8 contacts. It has to be used to insert the size 4 and 0 contacts. When the Arbor Press (11-7364) method of insertion is used, contacts and attached wire should be placed in the predetermined insertion tip and inserted into their applicable insert hole. Positive stop setting of the arbor press will control contact insertion depth.
- h. Continue in like manner (depending upon method of insertion) to seat the remainder of the contacts. If the contact becomes separated from the insertion tool during operation, DO NOT PROBE in an attempt to reposition the tool on the contact. The contact should be removed and reinstalled in the prescribed manner.
- i. Personnel inserting contacts will normally "feel" the contact reach its fully seated position. Visually check the mating ends of the connector to be sure all contacts are properly inserted to the same depth.
- j. After installation and inspection of contacts has been completed, slide all rear accessories forward and tighten with the 11-6147-1 pliers.

Note: The two stage insertion method of size 16 contacts described above is recommended to avoid possible contact bending.

Note: Contacts should not be removed unless absolutely necessary, since continuous removal tends to reduce contact retention.

#### 1. Removing Contacts for Replacement

- a. Loosen all rear accessories and unscrew them from the connector shell. Slide all parts back along the wires.
- b. Determine the appropriate removal tool from Table IV. Be sure to use the correct contact removal tip with the tool. Working from the front face of the connector, position the tool tip on the contact and push the contact back through the insert and remove.

Note: When removing contacts always push in a straight line parallel to the contacts to avoid possible damage.

- c. To replace contacts, follow the procedure given in Section I, "Installation".
